Re: Purchase of Crash and Evidence Scene Laser Equipment

At this time I am requesting approval for the purchase of Laser Technology crash scene and crime scene laser measuring equipment. This equipment is a long overdue addition to a Laser measuring device we currently own, that will allow us to quickly and accurately map out crash and crime scenes and download that information into an included computer software program that produces professional CAD drawings. This purchase also includes the operator training needed to operate the equipment.

This equipment can be purchased through the State of Michigan bid process under contract number 071B4300046, allowing us the most competitive price available through Laser Technology, Inc.

Laser Technology Mapstar Truangle, Quickmap 3D Recon Truangle Kit, CrashZone 9 with 3D Viewer, Tribach and adapter, Batteries and operator training- \$5,545.25.

Recommendation: Accept State of Michigan bid of \$5,545.25 for the purchase of the Laser Technology equipment, software, and training.
